Integration-Release Checklist

This document lists all tasks that need to be done upon creating a new integration release.

When preparing a new release, all items for the given release must be set to

Preparing an Integration-Release

To prepare a release, perform the following steps:

Edit the Datatype and add a new attribute, named after the build (e.g. 0.4.0). Give it the status type.

Remove older releases from the specification editor (they will still be visible through the properties view)

Add the current release to the specification view.

Checklist

All plug-ins have the correct version number

The About... dialog has the correct version number

The wizard creates a model with the correct version number

GUI-Tests

Perform Drag & Drop

Create link with drag and drop

Set a type, the values should be update

Try printing, using a spec that uses the Headline Configuration (like this
